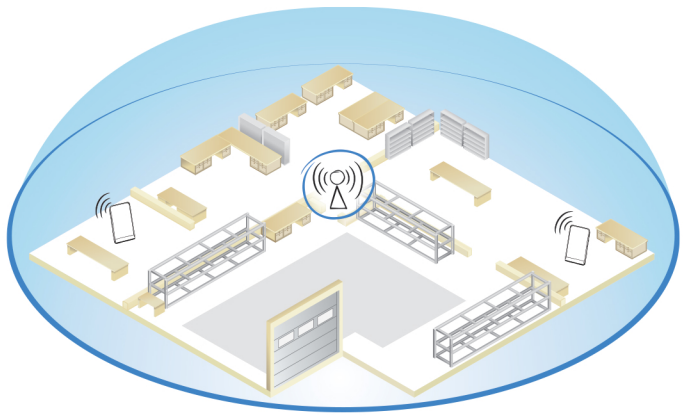
Private Cellular Network

What is a Private Cellular Network (PCN)?

The **Private Cellular Network** is the most resilient cellular network available for small to medium sized business. Why?, because it's a cellular network that isn't shared with thousands of other users so you get the best quality voice and highest bandwidth available. The **Private Cellular Network** is the only cellular offload product available that doesn't require WiFI or Smartphone Apps to make and receive calls.



The Private Cellular Network is for **TruConverged** or **TruMobile** customers. When a **TruMobility** device enters the office, the phone is automatically connects to the PCN.

Clusterable

Large physical spaces or locations with a high number of Mobile Users - the **Private Cellular Network** can be clustered to accommodate millions of square feet or hundred of users. This is perfect for large campuses, manufacturing facilities, or construction areas.

Serviceability Grid
