

SIP Trunk - Next Generation Voice

Why use old analog lines or PRI's - SIP Trunks give you the voice quality you expect plus added features, more scalability all at a lower cost. TruMobility helps businesses save as much as 70% as compared to traditional PRI's or POTS lines.

Always Connect Workforce

Businesses today are more mobile than ever and service providers are expected to keep these mobile workers productive by extending office resources out to the mobile phone. Among the most important resources is access to the corporate phone system. In addition lower cost and more features TruSIP allows you to make the mobile phone an extension of your existing corporate PBX enabling features such as mobile as an extension, park/retrieve and 4-digit dialing between the desk and mobile.

Disaster Recovery

TruSIP guarantees continuous communications in the event of a disaster or any disruption in service. All features and call management reside in TruMobility's secure datacenters. Calls are automatically re-directed to an unaffected site so you'll never miss a call.

Ultimate Flexibility - Bring Your Own Broadband

TruSIP offers the ultimate in flexibility. You can bring your own approved broadband connection or use TruMobility's nationwide MPLS over xDSL, T1 or greater. TruSIP can accommodate most broadband connections including 4G wireless.

Highly Scalable

Buy only the trunks you need. With TruSIP, you pay by the line and new lines can be ordered within minutes. TruSIP scales at your pace.

Nationwide Availability

TruSIP service is available with number portability virtually everywhere in the US.
