

TruGuard 4G Wireless Back-Up

4G High Speed Wireless Back-Up Solution

When your primary Internet service experiences an outage your business is at risk of losing revenue, productivity and even customers. A wired connection such as Cable, T1 or Ethernet is still vulnerable to service disruptions such as cable cuts, downed telephone lines, severe weather, etc.

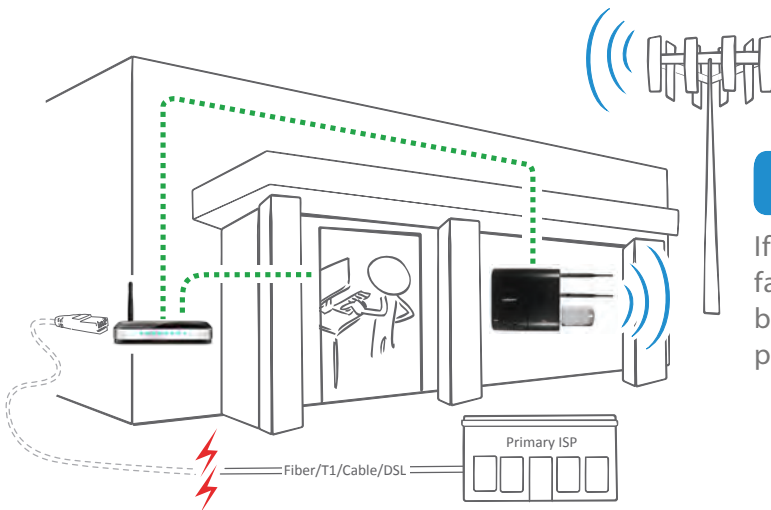

Only a wireless back up solution can create a Truly redundant path to the Internet. With TruGuard, your business will always remain connected to the Internet, even in the event of a catastrophic line cut.

On Demand Back Up with Rollover Data

With TruGuard, you only pay for the data that you use. Our low fixed monthly price will give you cost effective piece of mind knowing that your business will never be without Internet access. The data that you purchase will rollover until you need it. If TruGuard is engaged the 4G data is automatically refilled.

Multi Location and Enterprise Customers

TruGuard offers shared 4G data across multiple locations and custom data plans. Static IP Addresses are available in select markets. Ask your TruMobility consultant about our Enterprise Shared Data Plans.

Monthly Service\$19.99/Month

Step 1
